**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Su et al. (US Pat. 6,897,195).

Su et al. disclose a composition containing L-menthol which can be combined dimethicone, with surfactants, such as sorbitan oleate, and oils and be in the form of a nanoemulsion and an embodiment is disclosed containing L-menthol, dimethicone and sorbitan oleate (Column 4, lines 41-38, Column 5, lines 1-16, column 6, lines 1-31).

The prior art discloses a composition containing L-menthol which can be combined dimethicone, with surfactants, such as sorbitan oleate, and oils and be in the form of a nanoemulsion and an embodiment is disclosed containing L-menthol, dimethicone and sorbitan oleate. The difference between the prior art and the claimed invention is that the prior art does not expressly disclose an average particle or droplet size of less than 100 nm. However, the prior art amply suggest the same as the prior art discloses that the composition can be in the form of nanoemulsions. As such, it would have been well within the skill of and one of ordinary skill in the art would expect that the L-menthol composition can be prepared having particle or droplet sizes less than 1 micron which range encompasses the claimed range of less than 100 nm.

Art Unit: 1616

Therefore, the claimed invention, as a whole, would have been *prima facie* obvious to one of ordinary skill in the art at the time the invention was made, because every element of the invention has been collectively taught by the combined teachings of the references.
